IT Due Diligence

Assessing Operational Efficiency and Risk

IT Due Diligence assesses the strength and scalability of a company's IT systems and infrastructure, ensuring reliable operations. Our process typically involves expertise from a CIO-level professional, tailored to the needs of traditional, non-technology businesses such as manufacturing, accounting, or engineering.

FOCUS AREAS

- **IT Infrastructure:** Analyses the strength and reliability of networks, hardware, and operational systems.
- **Software:** Assesses the scalability and compliance of the company's software applications and systems.
- **Security:** Identifies vulnerabilities and ensures the company's data protection measures meet industry standards.
- **IT Operations:** Reviews disaster recovery plans, ongoing maintenance, and support structures.
- **Scalability:** Determines whether the IT environment is equipped to support future business growth.

POTENTIAL INSIGHTS UNCOVERED

- IT bottlenecks or infrastructure weaknesses hindering growth.
- Gaps in cybersecurity/unaddressed vulnerabilities that pose investment risks.
- Legacy systems that require expensive upgrades or replacements.
- Opportunities to streamline IT operations for cost efficiency and scalability.

AVOID PITFALLS, UNCOVER OPPORTUNITIES

- Confirm that the business is secure and technology is utilised efficiently to drive growth.
- Assess whether the people managing the technology are suitable for the next stage of growth.
- Verify that key revenue-generating systems, including order-to-cash, ERP, and specialised workforce management software, are fit for purpose.
